Tool Teaching Order:

1. Magnet 	2. Safety Glasses 	3. Claw Hammer 	4. Screwdriver 
5. Palm Drill 	6. Tack Lift 	7. Pistol Drill 	8. Saw 

Wood Progression:

Start with Balsa Wood	Progress to Soft Pine
• Very soft wood • Generally used for model making • Offers little resistance to nails and screws • Easy to cut • Ends unlikely to need sanding.	• Fairly soft wood • Offers some resistance to nails and screws so good to progress onto when children find Balsa wood too soft. • Fairly easy to cut • Ends may need sanding after cutting
Wood sizes	
• Start with long pieces of wood that children can easily hold away from the 'work' end.	• Progress onto smaller pieces so children have to manipulate the wood and the active working area with more control.

Project Progression:		
Start with focus on skills of using tools - No plan in mind - Just using nails or screws into wood.	*Begin to think about placing pieces with purpose* - Selecting corks/bottle tops - Wanting to connect specific items	*Have a clear end goal in mind and actively work towards it* - Say what they want to make before they start - Knowing what materials they will need to achieve end goal - Placing pieces with purpose - Is able to talk about what they are making
